model.baseModel.baseModel

```
graph BT; A[model.baseModel.baseModel] --> B[object]; A --> C[object];
```

The diagram illustrates a relationship where a single base model, labeled 'model.baseModel.baseModel', is associated with two separate object instances, both labeled 'object'. A horizontal line connects the two 'object' boxes, and a vertical line descends from its center to the 'model.baseModel.baseModel' box. From this point, two arrows branch out upwards to point at the bottom of each 'object' box, indicating that the base model is shared or inherited by both objects.
